Art Unit: 3748

Claims 2-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 2, line 4, it's unclear if the phrase "a labyrinth" refers to the same element as "a labyrinth" in claim 1, lines 3-4.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 are rejected under 35 U.S.C. 102(b) as being fully anticipated by U.S.

5743094 (Zimron et al).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 6-8, are rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S.

4786238 (Glaser et al) in view of U.S. 5156523 (Maier). Glaser discloses a method for cooling a seal in a turbocharger having a compressor and a turbine, a seal chamber 132 is formed behind a

labyrinth 140, an air passage is formed through an opening 62 for directing air into the seal chamber to cool the seal and reduce pressure. Glaser et al does not disclose that liquid is used instead of air. Maier is relied upon to disclose that it's well known to use coolant/liquid to circulate through a seal chamber 18 to cool the chamber. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use liquid instead of air in the seal chamber of Glaser et al as taught by Maier for the purpose of more effectively cooling the seal chamber because liquid is cooler than air.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. .

Wescott et al, Kimura et al, Byrne et al, and Gozdawa, disclose the concepts of circulating cooling fluid through seal chambers.
